

RHYE'S AND FALL OF CIVILIZATION MULTIPLAYER

README

Updated to v1.17

This is the multiplayer version of **Rhye's and Fall of Civilization for Beyond the Sword**. It comes with a few changes that were needed in order to make it work.

INSTALLATION

- If you already installed a previous version of the MP mod, you must **delete it** for ensuring compatibility
- Extract the files contained in the zip in **...your Civ4 folder...\BTS\Mods**
- Start Civilization, go to **ADVANCED**, then **LOAD A MOD**, select **Rhye's and Fall MP**
- After the mod loads, choose **MULTIPLAYER**, **PLAY A SCENARIO**, and then you can choose your game mode

WHAT'S BETTER

- A new starting point (800 BC) has been added to directly jump to classical civs
- You can jump to any other alive civ, any time. Including human players who may want to join a game that's already started

WHAT'S WORSE

- During the birth of civs, no popups show up. It is understood that the answer is yes (cities flip peacefully)
- Mercenaries mod component is not compatible with multiplayer, thus it has been disabled
- World Congresses have been disabled
- Exile event has been disabled
- Plague mechanics has been simplified

OTHER IMPORTANT NOTES

- **Maximum 4 players.** Unfortunately it has been proved that while the mod is perfectly playable in 2 and possibly in 3, it's not always in 4 (just one slow connection may screw up the game), and in 5 or more it's completely unplayable due to lag and to frequent OOS.
- Despite all the fixes, **Out Of Synch (OOS) errors** may still appear. In case it happens, the best solution is to quit, reload the game and all reconnect. In case of a single player showing different sync numbers from the rest, it'll be enough if only him reconnects. It has been reported that random events (which can be turned off on game setup) and the plague are possible causes, but while they **rarely occur in 2 players**, they will be more frequent as the number of players grows. You are warned!
- There is no autoplay, so it's possible at the beginning to choose one of the 4 civs available in the start. Later switches are available as **Takeover AI option** (which in fact is hidden) is permanently enabled. Civs with a spawn date earlier than the starting point can be controlled after **250 AD** in case of the 800 BC start (for example Egypt) or after **1400 AD** in case of the 600 AD start (for example Carthage)
- The **Carthaginian UP** has been changed to the Power of Bargaining: **+1 trade in every sea plot**
- The **Ethiopian UP** has been changed, since there are no congresses: **Ethiopian cities can't revolt and join another civilization**
- The **French UP** has been made more strong, considering that it will be useless on human players
- Stability star ratings in the financial advisors are **reset to 3** anytime you load a saved game or switch a civ: the following turns stars will adjust gradually, but the permanent modifiers will be lost and the player should keep that in mind (comparing the actual values with the ones after the reset)
- If you **can't see any game** listed in the lobby, it means that you (or the one who create the game) are using **different game files**. Even a single file renamed or moved, even if restored, will prevent the compatibility. In this case you should delete your mod folder, download the mod again and reinstall it.
- If, when **loading a savegame**, a player can't join, try to wait for all the players in the staging area, rather than one person loading the mod and the rest joining once the game has begun.

HOTSEAT MODE

Hotseat mode works with a few differences:

- **Jumping to other civs** is not possible, either by popup or (obviously) taking over an AI. But it's possible to pick **from the beginning** civs that will spawn later: until then, their turn will be automatically skipped.
- There is **no maximum number of players cap**
- Stability **star** ratings in the financial advisors are **not shown**
